**1** **To Program Up to 3 Presets:** Use the up/down arrows to find desired height, then press "M" followed by the number 1, 2, or 3.

2 **To Test Programmed Height:** Use the up/down arrows to adjust the table to a height other than the preset height. Then push and hold the number you programmed to see if it automatically adjusts to the height programmed in Step 1.

Note: If it does not adjust to the programmed height, repeat Step 1 followed by Step 2.

⚠ Caution: Once the preset number is pushed, the base will automatically moved to the programmed height.

ASR/RST Error Code

1   Reset the Base by holding the down arrow for 10-15 seconds until
    it reaches its lowest point and numbers appear on the handset.

No Power

1   If there is no power in the Base, the Control Box may be damaged –
    contact us at cc@amqsolutions.com to order your replacement.

E07/E08 Error Code: Legs Not Moving Uniformly

1   If the legs are not moving uniformly, or the Base goes up when the down arrow is pressed,
    reset the Base by holding the down arrow for 10-15 seconds until it reaches its lowest point
    and numbers appear on the handset.
2   If the issue persists, swap the legs. (The legs with the pre-assembled screws should
    be facing the user.)

If your issue persists, please contact AMQ Customer Care
at cc@amqsolutions.com or (877) 801-0370.
